## PROFILE

Final-year Computer Science student at Manchester Metropolitan University with a particular interest in cybersecurity and AI. Strongest coursework has been in ethical hacking and networking, including designing and testing a full multi-site network from scratch. Combines this with three years of varied part-time work that has built reliability, teamwork, and the ability to perform under pressure.

## TECHNICAL SKILLS

- Languages: Java, HTML, SQL, Processing
- Security & networking: ethical hacking fundamentals, VLANs, RIP v2, VLSM/CIDR addressing, DHCP, SSH
- Tools: Git, Cisco Packet Tracer, Cisco IOS
- Other coursework: databases, algorithms & data structures, software development processes, computer architecture

## PROJECTS

### Multi-site network design — All Star Gaming

*Solo project*

- Designed, configured, and tested a secure two-site network in Cisco Packet Tracer, connecting London and Manchester offices plus a factory workshop.
- Used VLSM/CIDR to size each subnet to its actual device count, VLANs to separate wired, wireless, and factory traffic, and RIP v2 for dynamic routing across a fibre WAN link.
- Configured DHCP for automatic address allocation and SSH with local authentication in place of Telnet.
- Verified the design with a documented test suite (DHCP, inter-VLAN routing, inter-site connectivity, RIP propagation) and wrote up its limitations and scaling path.

### Movie Database

*Group project*

- Contributed the movie details page, pulling film data (cast, budget, and other metadata) from a SQL-backed database through a Python/Flask back end.
- Front end built with HTML, CSS, and JavaScript.

### Bookshop Checkout

*Web development coursework*

- Built a book store site with a working checkout flow, including client-side JavaScript validation of card number, CVV, and expiry date before submission.

[github.com/devangill/bookshop-checkout](https://github.com/devangill/bookshop-checkout)

### Avoid the Obstacles

*Java / Processing*

- Built a 2D game with an inverted control mechanic — the player is nudged clear of drifting obstacles rather than controlled directly.
- Implemented distance-based collision detection and dynamic obstacle management using an ArrayList.

## EDUCATION

### Manchester Metropolitan University

2024 – Present

BSc Computer Science (final year)

### Joseph Wright College

2021 – 2023

BTEC Level 3, Information Technology

### Littleover Community School

2016 – 2021

9 GCSEs

## WORK EXPERIENCE

Bar Staff (Part-time), The Friary, Derby

Aug 2025 – Jan 2026

Warehouse Operative (Part-time), Kenect, Derby

Jun 2024 – Jun 2025

Ramp & Baggage Agent (Full-time), Swissport, Derby

Feb 2024 – Jun 2024

Retail Assistant (Part-time), TK Maxx, Derby

Jul 2022 – Jul 2023

Full detail available on request — see the general CV for a complete work history.
